Subject: Follow-up on last weeks discussion

Good Morning Steve,

I hope you had a nice weekend.

Thank you for the follow-up information after our call last week. I have a couple of follow-up questions and comments.

Not Responsive

Also, I am awaiting a few more calls in the WST comments. But I did get a call that indicated that NOAEL and LOAEL can be calculated for WST. Can you reach back to your lab and confirm? I was told there are a number of labs that can generate these numbers. If need be I can put you in touch with my contact so that the technical folks can work this out if you would like.

I hope to have answers to the remaining items early this week. Just as an FYI, the remaining concern was that the WST test did not specify reproduction as an evaluated end point in Statoil's response. This may have been tied to the 28 vs. 42 day tests, but I am not sure. Can you confirm whether or not that end point was intended to be established in the WST or not. The three requested for *H. azteca* and *C. dilutes* was survival, growth and reproduction.

Thank you,

JJ Justice
